

IsoTech Ink Employee Cybersecurity Handbook

Safeguarding our digital environment together.

Protect Your Passwords

Your password is the first line of defense for your account and sensitive company data. Follow these best practices:

- **Use Strong, Unique Passwords:** Combine uppercase and lowercase letters, numbers, and symbols. Aim for a minimum of 12 characters. A password manager can help you create and store strong, unique passwords.
- **Avoid Password Reuse:** Never use the same password for multiple accounts, especially for both work and personal accounts.
- **Never Share Credentials:** Your login information is for your use only. Do not share it with colleagues, IT, or anyone else.
- **Use MFA Whenever Possible:** Multi-Factor Authentication (MFA) adds an extra layer of security. Enable it on all accounts that offer it.

Lock Your Workstation

Leaving your workstation unlocked, even for a moment, can expose sensitive information.

- **Lock Devices When Away:** Always lock your computer when you step away from your desk, even for short breaks.
- **Secure Laptops During Travel:** When working remotely or traveling, ensure your laptop is physically secured and encrypted. Avoid leaving it unattended in public places.
- **Avoid Leaving Devices Unattended:** Never leave your work devices unattended in public spaces or unlocked areas.

Acceptable Use Guidelines

To maintain a secure and productive environment, please adhere to the following guidelines:

- **No Unauthorized Software:** Employees may NOT install any software on company devices without prior approval from the IT department.

- **No External File Sharing:** Do not share company files or sensitive information externally without proper authorization and secure methods.
- **No Unsecured USB Devices:** Avoid using or connecting unknown or unsecured USB drives to company devices. Use only company-issued and approved storage devices.
- **No Bypassing Security Controls:** Do not attempt to bypass or disable any security controls or measures implemented by IsoTech Ink.

Remote Work Security

Working remotely offers flexibility but requires extra vigilance.

- **Use Approved VPN Access:** Always connect to the company network using the approved Virtual Private Network (VPN) provided by IsoTech Ink.
- **Avoid Public Wi-Fi:** Refrain from using unsecured public Wi-Fi networks for work-related activities. If absolutely necessary, use the company VPN.
- **Maintain Updated Devices:** Ensure your work devices are always up-to-date with the latest operating system patches and security software.
- **Report Suspicious Activity:** Be vigilant for any unusual or suspicious activity on your devices or network and report it immediately.

Report Suspicious Activity Immediately

Your prompt reporting of suspicious activity is crucial to preventing security incidents. Please report any of the following immediately to the IT Security team:

- **Phishing Emails:** Emails that look suspicious, ask for personal information, or contain urgent requests.
- **Unexpected MFA Prompts:** If you receive a Multi-Factor Authentication prompt for a login you did not initiate.
- **Suspicious Links:** Clicking on links in emails or messages that seem unusual or lead to unfamiliar websites.
- **Unusual Login Notifications:** Alerts about logins from unfamiliar locations or devices.

Thank you for your commitment to maintaining a secure environment at IsoTech Ink. Your diligence is vital in protecting our company's valuable assets and reputation.
