

IsoTech Ink: Enterprise Cybersecurity Risk & Operations Initiative

Company Overview:

IsoTech Ink is a midsize logistics and digital printing technology company specializing in on-demand computer-based printing services and automated supply chain management solutions. The organization focuses on streamlining the end-to-end process of producing customized printed materials and delivering them seamlessly and efficiently to customers through technology-driven logistics systems.

The company relies heavily on cloud-based services, digital asset repositories, remote collaboration tools, and third-party vendor integrations to support business operations and customer fulfillment.

Company Structure & Size:

- 7 Core departments
- Remote and Hybrid workforce environment
- Approximately 200 employees

Departments

- Human Resources (HR)
- Information Technology (IT)
- Supply Chain
- Marketing
- Sales
- Executive Leadership
- Warehouse Operations

Each department is overseen by:

- 1 Department Manager
- 1 Executive Head

Workforce Environment

IsoTech Ink operates using a mixed workforce model:

Remote Workforce:

Most employees within:

- Marketing

- Sales

Work remotely full-time

Hybrid Workforce

Some executive leadership personnel operate in hybrid environments.

On-site Workforce

Most IT, HR, warehouse, and supply chain employees work on-site Monday through Friday.

Technology Environment

IsoTech Ink utilizes:

- Digital asset repositories
- Cloud-based collaboration platforms
- Vendor-integrated logistics systems
- Remote and Mobile Devices
- Windows-based endpoints
- Centralized user authentication systems

The organization also processes:

- Internal company data
- Operational logistics information
- Customer payment information
- Proprietary design assets

Current Security Concerns

Senior leadership identified multiple cybersecurity and operational concerns, including:

- Weak remote work procedures
- Inconsistent access controls
- Phishing attempts targeting employees
- Poor third-party vendor security oversight
- Limited employee cybersecurity awareness
- Insufficient security monitoring visibility
- Incomplete incident response procedures

Security Improvement Initiative

To address these concerns, IsoTech Ink initiated an Enterprise Cybersecurity Risk & Operations Improvement Program.

Project Objectives

The primary objectives of this initiative include:

- Improving employee security awareness
- Strengthening cybersecurity governance
- Enhancing security monitoring capabilities
- Improving incident detection and response
- Establishing stronger vendor risk management practices
- Securing remote and hybrid work environments
- Reducing overall organizational risk exposure
- Improving endpoint visibility and logging

Planned Security Enhancements

The project roadmap includes implementation and evaluation of:

Security Operations Improvements

- Alert detection workflows
- SIEM monitoring
- Log ingestion procedures
- Enhanced Windows logging
- SPL query development
- Dashboard creation

Threat Monitoring Objectives

Monitoring for:

- Failed login attempts
- Suspicious DNS requests
- Brute force activity
- Suspicious PowerShell execution
- Unusual network traffic patterns

Governance & Compliance Improvements

Development of:

- Incident response procedures
- Security policies
- BYOD/mobile device policies
- Vendor Security review procedures
- Employee awareness training

Roles & Responsibilities

The Cybersecurity Risk and Operations Coordinator was brought in to:

- Strengthen operational security controls

- Assess organizational cybersecurity risk
- Improve governance processes
- Enhance monitoring and visibility capabilities
- Support long-term cybersecurity maturity improvements
